SCHOOL ADVOCACY & PEER AWARENESS | STORY NO. 2

What That Beep Means

A Guide to CGM Alarms in the Classroom

If you hear a high-pitched tune or a repeated buzz from my desk or backpack, do not worry - **I am not playing a game on my phone!** That sound comes from my Continuous Glucose Monitor (CGM). It measures my blood sugar continuously and alerts me if my levels are going too high or dropping low.

High Alarm

My blood sugar is going too high. It means my body needs extra water or an insulin adjustment.

Low Alarm

My blood sugar is dropping low. It means I need quick-acting sugar immediately, like juice boxes or fruit gummies.

How Classmates Can Help

1. **Do not panic.** The beep is the monitor doing its job.
2. **Let the teacher know** if I look tired or shaky.
3. **Give me a minute** to treat my low.
